

# »We build trust online.«

## Trustami GmbH

Trust goes Social

### Our idea

Trustami calculates the trustworthiness of persons and enables a worldwide and user-controlled reputation transfer.

Trustami builds upon a sophisticated profile mapping engine and a self learning analysis algorithm for trust scoring. This allows Trustami to analyze and evaluate all available data from social media- (e.g. Facebook, Twitter), e-commerce- (e.g. eBay, Etsy) and sharing economy-networks (e.g. Airbnb, BlaBlaCar) in real time.

Trustami offers the most accurate estimation of the identity and trustworthiness of individual and legal persons based on existing online profiles. The cross-platform Trust ID allows access to previously unreachable customer segments and to build trust on the Internet.

### Team

**Dr. Jonas Repschläger**  
**Christoph Röder** (M.Sc.)  
**Thorsten Pröhl** (Dipl.-Phys.)  
**Nils Meinhardt** (M.A.)  
**Prof. Dr. Rüdiger Zarnekow**

#### Sector

Trust

#### Mentor

Prof. Dr. R. Zarnekow,  
Faculty VII - Economics and  
Management

#### Support

EXIST start-up grant (2014)

#### Year founded

2015
