Musical Interaction

# »Connecting the world of digital music«

## Coire GmbH

Cable-free synchronisation of digital musical instruments

### Our idea

Coire is developing a new software technology with which various music programs on different devices and operating systems can be synchronised with each other. This technology makes it possible for musicians to connect the music programs and music applications on their computers and mobile devices in an innovative manner without the use of cables. Through this technology, music programs and devices can easily exchange musical information and, for instance, synchronise their tempo and key with each other. Musicians no longer have to worry about technical set-ups and can concentrate entirely on their creative process.

### Team

**Marius Braun** (Sound Studies)  
**Christian Dietz** (Communication Studies & Technical Acoustics)  
**Florian Goltz** (Communication Studies & Technical Acoustics)

### Sector

Creative economy

### Mentor

Prof. Dr. Stefan Weinzierl,  
Faculty I – Humanities

### Support

ESF grant (2012)  
EXIST start-up grant (2013)

### Year founded

2014
