## DISDAR GmbH

Semantic document analysis

### Our idea

DISDAR develops software which automatically extracts important information from documents.

Our research in the area of machine learning allows computers to understand the content of documents. We are currently specialized in invoices, as in Germany alone more than 3 billion invoices are typed by hand every year.

DISDAR carries out this work, and offers its customers:

- Extraction of data from documents to the same level of precision as that of human experts
- A flexible, secure and easy-to-use cloud solution
- Transparent costs per invoice, without any installation fees or service contracts
- Interfaces and modern APIs for the integration of the technology into existing products.

### Team

**Lukas N.P. Egger** (Graduate Engineer (Dipl.-Ing.) in Industrial Engineering & M.A. in Philosophy)

**Mathias Eitz** (Doctor of Engineering (Dr.-Ing.) in Computer Science)

**Sebastian Koch** (M.Sc. in Computer Engineering)

### Sector

Software B2B

### Mentor

Prof. Dr. Marc Alexa, Faculty IV - Electrical Engineering and Computer Science

### Support

EXIST start-up grant (2013)  
StarTUp + Program (2014)  
Business Angel investment (2014)

### Year founded

2013
